Subject: Experience Using Shutoff Devices

As a response to your request regarding use of shutoff devices for *ПГБ-1000М*-series steam generators, we are informing you that the *Kalininskaya* NPP does not have much experience using such devices. However, the experience we do have suggests that these devices work as intended throughout repair campaigns.

As for drawbacks, they are hard to install/dismantle, require use of polar cranes, and cause problems due to the need to find place for and store big sets of shutoff devices and special tools in the central hall during PPMs.

Chief Engineer
